

CARPET CARE PRODUCTS & CLEANING METHODS

The carpet in your facility provides a combination of beauty and comfort for employees and guests. Building owners, managers and maintenance staff have searched for a carpet care method that cleans thoroughly, safely, dries quickly and is economical to use. While the cleaning industry has responded with numerous cleaning methods, no one method appears to meet all the required objectives. The best carpet cleaning program is a combination of methods utilizing highly effective products. Achieving quality results begins with frequent routine vacuuming (dry soil removal) and continues with regularly scheduled deep cleaning using a dry cleaning and/or wet extraction cleaning system. Our comprehensive system of cleaners, spot removers, tools and related carpet care products offers a simple and cost effective program for maintaining carpets. Utilizing cutting edge formulations like our HOST Dry Carpet Cleaner or our CARPET SENSE® Extraction Carpet Cleaner, will ensure your carpets are beautifully and efficiently cleaned with a greatly reduced potential for re-soiling, a major reason for premature destruction of carpet fiber.

Four Important Cleaning Steps: All carpet cleaning methods require four important cleaning steps; dry soil removal, soil suspension, extraction, and drying. Results will be greatly diminished if you do not perform each of these processes every time you perform carpet cleaning.

1

STEP: Dry Soil Removal (Vacuum the Carpet)

The first step in carpet cleaning. Carpet cleaning chemicals cannot break down dry soil therefore you must make an effort to remove as much dry soil as possible before you apply carpet chemicals. Your cleaning chemical will try to break down these insoluble dry soils, but cleaning results will be diminished if you do not remove dry soils effectively by vacuuming the area you are about to clean thoroughly. One or two passes may not be enough. In doorways, 10-12 slow, deliberate passes will remove about 60% of the dry soil. The more dry soil you remove, the better the carpet cleaning chemical will be able to break down soluble soils.

Depending on consideration (e.g. time available), choose between these two programs:

CONSIDERATIONS	METHOD	ADVANTAGES	REQUIRED SKILL	PRODUCTS RECOMMENDED
<ul style="list-style-type: none"> • Time available • Amount of foot traffic 	STEAM CLEANING (AKA hot water extraction)	<ul style="list-style-type: none"> • Most effective method • Restorative cleaning • Like in-plant cleaning • No pile damage, no residue • 600-1,800 square feet per hour 	Medium	<ul style="list-style-type: none"> Carpet Sense® Traffic Lane Cleaner Carpet Sense® Extraction Carpet Cleaner Carpet Sense® Extraction Defoamer
<ul style="list-style-type: none"> • Material of carpet • Type of soil 	DRY CLEANING	<ul style="list-style-type: none"> • Very fast drying time • Breaks down oily soil build up • Water based (not a solvent) • Saves water use (none required) • 300-2,000 square feet per hour 	Medium	<ul style="list-style-type: none"> HOST Prep Traffic Lane Cleaner HOST Zapper Carpet Spot Remover Kit HOST Dry Carpet Cleaner

2

STEP: Soil Suspension (Pre spray the carpet for stain treatment)

The proper use of a highly effective detergent such as CARPET SENSE® Traffic Lane Cleaner together with CARPET SENSE® Extraction Carpet Cleaner will ensure an efficiently cleaned and preserved carpet. Soil suspending detergent works to attach itself to soluble soil particles (soil that dissolves in water) to carry these from the carpet during extraction. If left in the carpet, soil particles work to break down carpet fiber to dull appearance and shorten the life of your carpet. Soil suspension also has important 4 principles. Each must be used in careful balance. If you subtract or limit one of the principles, you must increase the other three:

Time : Your chemicals need time to work. It is best to apply the chemical as a pre-spray and follow instructions (usually this requires you to allow 5-7 minutes for the chemical to begin breaking down soil).

Agitation : Once the pre-spray has been applied to the carpet, it should be agitated or scrubbed. A pile rake works well in working the chemical into the carpet pile, dislodging soil, and helping the chemical break down soluble soil.

Chemical : The quality of your chemical significantly impacts your cleaning result. If you are using a poor-quality chemical you must increase the other three principles. To prevent that, use of CARPET SENSE® brand carpet care products helps ensure optimal results.

Temperature : The higher the temperature in the hot water extraction method, the better. For every 18 degree increase in cleaning temperature above 140 degrees, cleaning effectiveness is doubled.

3

STEP: Extraction

When using the hot water extraction method, clean water helps rinse the detergent from the carpet fiber and extracts emulsified soil and detergent from the carpet. Leaving detergent in the carpet pile can lead to rapid resoiling so thorough extraction is important. When using the dry cleaning method, powder is applied to the carpet fiber, agitated with a pile lifter or other mechanical agitator, and then vacuumed (extracted) to remove the powder with attached soil particles.

4

STEP: Grooming & Drying (Grooming the carpet)

The fourth important step is drying. When using the hot water extraction method, you must get the carpet dry within 8 hours or mold can develop. The use of carpet drying fans will help speed the drying time of the carpet. When using the dry cleaning method, after extraction, the carpet will dry quickly.

CARPET SENSE® EXTRACTION CARPET CLEANER

A unique blend of wetting agents, solvents, soil suspending agents and optical brighteners for use with modern hot water extraction machines. Dilute 1:128 for light soil. Made in USA.

PACK	REF. NO.	PART NO.

HOST® DRY CARPET CLEANER

Green, clean & dry, HOST is an environmentally preferred product that really works! Certified by Green Seal, WoolSafe approved and a member of the US Green Building Council. HOST contains a balanced blend of water, detergents, wetting agents and natural ingredients. As the low moisture HOST Cleaner is brushed through the carpet, the absorbent particles deep clean by dissolving, trapping and removing spots, spills and greasy, oily dirt. Like a sponge in a kitchen, HOST holds and controls the cleaning liquids so dissolved dirt doesn't run into carpet backing. After vacuuming up the HOST Cleaner, carpet is clean, dry and back in service. Host is natural, non-toxic, biodegradable and safe for people and pets. Excellent for most cleaning jobs. Great for greasy, heavy soil, restoration or general cleaning. For HOST equipment, see pages 76-77.

HOST PREP® TRAFFIC LANE CLEANER

HOST Prep Traffic Lane Booster is a powerful cleaning booster containing professional strength detergents and penetrating solvents combined to help break surface tension and emulsify excess oil binding dirt to carpet fibers. HOST Prep Traffic Lane Booster puts extra cleaning power just where you need it; entryways from parking lots, doorways to kitchens, on hard-to-clean spills such as thick, greasy food, etc. It is, however, meant to be used sparingly and only in a light mist. One gallon of concentrate makes five gallons of ready to use solution. Dilute 1:5. A premix is available in smaller 7 ounce size bottles ready for use directly on carpets.

TIP

Hard Floor Cleaning and Maintenance Guide

Hard surface floor care is important for creating a safe and healthy environment, keeping a facility's image looking great, and to ultimately ensure satisfaction for all occupants. Any hard surface floor care program must consist of a preventative, daily, interim, and restorative maintenance program.

Preventative Maintenance

Keeping floors clean begins outside a facility. Remove debris from the building's entrance with commercial brooms, rakes and leaf blowers. Position weather-resistant mats outside and inside the doors to trap dirt and debris before contaminants reach the floor.

Matting Saves Labor and Related Expenses

Money spent keeping soil from entering a building will save 10 times the cost of doing so. That means for every dollar spent on a floor mat to capture soil from getting inside a facility, you will save \$10 or more in maintenance costs normally required to remove the soil once it gets inside. Entrance mats and floor mats save money!

3M™ NOMAD™ SCRAPER 6050 MEDIUM TRAFFIC BACKED MATS

Designed for use inside building entrances or other interior traffic areas where dry dirt tracking can occur. The resilient loops remove dirt and grime and keep them hidden from view.

- Vinyl loops aggressively scrape dirt from shoes.
- Vinyl backing will not stain floors and keeps moisture and dirt from passing through mat.
- To clean, just shake, vacuum or rinse with hose.

Mats may be custom imprinted. Please contact us for more information.

NEEDLE-RIB™ SCULPTURED RIB PATTERN CARPET MATS

The sculptured ribs of this non-woven polypropylene floor mat work extremely well at scraping dirt and grit from footwear. Made for long wear and color fastness indoors or outdoors, the material is stain and fade resistant to remain looking new as long as possible. Channels between the ribs of these carpet mats help conceal soils until they can be quickly cleaned (by simple shaking or vacuuming). Solid vinyl is non-skid and helps keep moisture from the floor surface.

- 100% polypropylene face fiber offers long wear and color fastness.
- Non-skid, solid vinyl backing keeps moisture from floor surfaces.
- Stain and fade resistant - stays looking new
- Use indoors or outdoors.

Mats may be custom imprinted. Please contact us for more information.

Daily Maintenance

- Remove dirt from the floor mats with vacuums, push brooms and/or sweepers.
- Sweep floors with a clean, durable broom and dust pan, and if appropriate, use a sweeping compound for a more thorough clean.
- Vacuum high-traffic areas daily, using a suitable-sized vacuum to maximize labor productivity and ease the transition from hard floors to carpets.
- Remove excess dust with a cotton or microfiber dust mop. Apply dust mop treatment to mop heads to ensure all dust and debris adhere.
- Clean floors with a wet mop and neutral floor cleaner compatible with the composition and finish of your floor.

3288

SWIFFER® SWEEPER DISPOSABLE DRY CLOTH REFILLS

The Swiffer Sweeper Disposable Dry Cloth Refill picks up more of the dust, dirt, hair and common allergens than traditional methods. Deep ridges and grooves in each cloth conform to the surface of your floor to help trap and lock dirt, dust and hair. The electrostatic charge also helps attract difficult contaminants for a thorough clean. By simply attaching the dry, electrostatic cloths to the 10" wide Swiffer Sweeper Tool, any surface soil is history, even in the hard to reach places. Cloths are also effective when used alone for hand dusting. The convenience of these disposable cloths truly eliminates the fuss of dust mops - simply use one cloth completely and throw it away when done.

SWIFFER® WETJET® WOOD FLOOR SPRAY MOP SYSTEM

The Swiffer WetJet Hardwood Floor Spray Mop System delivers a great clean on virtually any hardwood floor. With a unique dual-nozzle sprayer, this all-in-one mopping system breaks up and dissolves tough messes for a powerful clean. Its cleaning solution loosens dirt and lifts it off the floor, pulling dirt and grime into the Swiffer WetJet Hardwood Floor Pad and locking it away for good. Absorb + Lock Strip helps trap soil, dirt & grime deep in pad so it doesn't get pushed around. It is safe on all finished wood floors.

WEDGE DUST MOP

Using the Wedge Dust Mop Handle and Frame together with the Wedge Dry Dust Mop Pad is an efficient and convenient way to keep small and confined floor areas (like offices, patient hospital rooms, school rooms and commercial spaces) clean. Its sturdy construction features a 60" lacquered hardwood and zinc-plated steel wire frame to reach tight spaces. The Wedge Dust Mop itself is a launderable, triangular-shaped dust mop made of 100% long stable cotton yarn with a polyester backing for use with the Wedge Dust Mop Handle and Frame.

TIP

Wet Mops Selection

Some wet mops are better for specific cleaning jobs than others. To help you get the job done quickly and efficiently, the following guide explains how to distinguish different kinds of wet mops and what they are best used for.

Consider the following wet mop traits:

Absorbency

The absorbency of a mop refers to its ability to pick up and hold liquid. Microfiber, rayon, and cotton yarns have the highest absorbency, leading to greater productivity and worker safety.

Release

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Microfiber, rayon, and synthetic yarns offer the best release of liquids and most efficient application of cleaning solutions.

Laundryability

The laundryability of a mop is based on the number of commercial washing and drying cycles it can withstand. Microfiber, synthetic, and blended fiber wet mops are best.

Durability

The durability of a mop is a measure of how long it will perform before needing to be replaced. Antibacterial, microfiber, synthetic, and blended fiber wet mops are the most durable.

Construction

Wet mops are constructed in cut-end and loop-end varieties. Cut-end mops are economical for general purpose use, are not launderable and may tend to lint. Loop-end are best for both finish and general purpose mopping, can be laundered and will not fray.

General Mopping

Choose mops with high absorbency, release, and durability. If laundering is conveniently available, launderable mops will be the most overall economical choice. Microfiber, synthetic, rayon, and blended fiber mops with looped ends and woven tailbands offer the best performance and laundryability.

TIP

Color Coding

MaxiPlus Microfiber wet mops feature a color band representing their size (green for medium, red for large) to quickly identify mop size by color band. The color difference can also help maintenance staff separate cleaning areas to prevent cross-contamination.

Finish Mopping

Look for microfiber, rayon, or synthetic mops for high absorbency and release, and construction features such as tailbands and looped ends for better floor coverage and less streaking.

Cellulose Refill	4.5" x 8.5"	4030500	EE015	1185

TIP

Microfiber floor cleaning system steps

1. Using our microfiber charging bucket, place one or more (up to 20) microfiber floor pads in the bucket. If applicable, cleaning or disinfectant solution can then be added as appropriate.
2. Place the microfiber wet or dust mop on the floor you intend to clean with the correct side down. Then place the handle and frame on to the pad, the frame should be centered on the pad so about an inch of the pad is overlapping the frame on each side.
3. Moving the mop through the room in a systematic way, mop the entire floor surface. As you walk backwards through the room working the mop side to side, twist the handle to turn the mop, almost in a figure eight motion, so the same edge of the mop is always in front (always have the same end of the mop moving forward). This will prevent dust and dirt from being left behind.
4. When finished, lift the mop up and gently separate it from the frame. Be careful not to let the dirt and debris you just collected fall back onto the floor. Use a damp microfiber towel to pick up any dirt and debris on the floor where you finished.
5. When it comes time to wash your soiled microfiber mops follow microfiber washing instructions. Never use fabric softeners with microfiber material.

MICROFIBER FLOOR CLEANING SYSTEM

Make dirt and dust disappear quickly, easily and more efficiently with our microfiber floor cleaning system products. Not only is our system fast and easy to use, but our microfiber tools help to leave any facility virtually spotless. Microfiber is a synthetic fiber made from a blend of polyester and polyamide. The small fibers are one-sixteenth the size of a human hair and they act as a "hook" to scrape up and hold dust, dirt, and soil - a wonderful alternative to cotton! While cotton fibers push dirt around and only hold on to the outer surface, microfiber grasps unwanted particles and does not leave any residue behind.

PRODUCT	SIZE (W X L)	COLOR	PART NO.

MAXIROUGH® WET MOP BUCKET & WRINGER COMBINATION

The MaxiRough Mop Bucket and Wringer is specifically designed to help make clean-up as effortless as possible. Each MaxiRough bucket features a universal visual safety warning, durable stain-resistant construction, non-marking casters and corrosion resistant hardware. The size of the MaxiRough bucket chosen should be based on the desired capacity to finish a typical mopping job without an excessive number of liquid change cycles. Both the side press and down press wringer accommodate wet mops up to 32 ounces in size. The down press wringer is preferred for larger size jobs because the mechanism increases leverage and can help reduce fatigue.

CARLISLE® WET MOP BUCKET & WRINGER COMBINATION

The Carlisle Mop Bucket and Wringer is our largest wet mop bucket available. It is specifically designed to help make clean-up as effortless as possible and is a must-have for any business with hard floors of any type. Each Carlisle bucket is made of corrosion-resistant polyethylene that can withstand temperatures from -40°F to 180°F for reliability and long-term use. The Carlisle down press wringer mechanism is designed to last 65,000 cycles and increases leverage to help reduce worker fatigue.

BLUE RIBBON™ FLOOR MACHINE PADS

Floor machine pads are manufactured from synthetic and natural fibers. The synthetic fibers used in floor pads are nylon and polyester. Natural-fiber pads are made of hair fibers blended with synthetic fibers. As the pads are being manufactured, a bonding agent is applied to the fiber. Minerals, added during the manufacturing process, attach to these coated fibers, giving the pad its abrasive character. The degree of abrasiveness desired is achieved by adding different size minerals in greater or lesser quantities.

CHOOSING THE FLOOR MACHINE PAD YOU NEED

- 1) **Procedure** - Floor pads should be chosen according to the procedure (e.g. stripping, cleaning, scrubbing, buffing, polishing or burnishing) to be performed. Once known, the question of floor type, floor finish and machine type need to be considered.
- 2) **Color** - Knowing the industry standard color-coding system helps you choose the correct pad matching the procedure and the result desired. Colors graduate from the most abrasive pad (black-darkest color) to the least abrasive pad (white-lightest color). If you have a job that requires stripping, you would choose a black pad. If you need to polish a floor, a light-colored pad would be recommended.
- 3) **Pad Size** - Pad size is determined by matching the pad diameter to the machine pad holder diameter.
- 4) **Hole Size** - Blue Ribbon™ pads normally have an approximate 1" (2.54 cm) standard thickness with an approximate 3" (7.62 cm) center hole punch-out plug ("bolt hole"). Should you require different center hole sizes, we can special order these for you with advance notice.

One thing you won't need to determine is pad quality. While the quality of floor pads varies from one manufacturer to the next, you can be assured that Blue Ribbon pads are made from the finest material available. Our pads are economical, long lasting and extremely durable.

BLUE RIBBON FLOOR MACHINE PAD SELECTION GUIDE

PROCEDURE	PROCEDURE DESCRIPTION	DESIRED RESULT	RECOMMENDED MACHINE SPEED (RPM)	PAD COLOR	MATERIAL	PAD SIZE	HOLE SIZE	PACK

STONE Please contact Blue Ribbon Supply for a custom Stone Care Program.

* High gloss is achieved by using 1500+ RPM machine to burnish finish after drying and curing 48 hours.

** Approximate cost per square foot includes product cost only.

*** Approximate average drying time to achieve tack-free finish. Allow 24-48 hours for complete curing before heavy traffic is allowed.
